

PRODUCT PRESENTATION

EALP

Light Alcoholic Extract of Propolis **14% of active ingredients**

For some products, it is necessary to use an alcoholic **Propolis** extract that does not contain a large quantity of soft extract.

For that purpose, we have developed the EALP which contains 140gr / kg of **Soft Propolis Extract** (active ingredients) and 53% of alcohol content. In order to soften the bitter taste of the **Propolis**, we add 20% of honey.

The EALP can be used in its natural form as a spray for oral hygiene or it can be added to food supplements or cosmetic products.

Physical Characteristics:

- * L'EALP can be dissolved in alcohol
- * L'EALP is indissoluble in oil.
- * L'EALP can be partially dissolved in water

Origin: France
