

PRODUCT PRESENTATION

PPM14 H

Pure Micronized Propolis for Hygiene 14 % of active ingredients

This extract is a variation of the PPM18A. However, it is for **external use**.

- * It is made from an entirely natural and mineral base (medicinal Talc) which molecules are charged with EADP – Dense Alcoholic Propolis Extracts (patented). The base is then dried and ground to make a very fine powder ideal to be used on the skin.
- * As it is highly suitable for skin applications, it can be used as a **talcum powder** (nappy rash, varicose ulcers, infected wounds) or be **inhaled** to clear the nasal passages.

The PPM 14 H can be used in a large range of products within the cosmetic, pharmaceutical and veterinary industries.

Origin: France
